

LONG MARCH 3A

Rocket

The Chinese invented firework rockets in the 12th century, but they did not launch their first space rocket until 1970. In the 1990s, they improved the Long March rocket, which has continued to grow ever more powerful. The Long March 3A was designed to launch massive communications satellites into space. In 2007, it launched China's first mission to orbit the Moon.

By mid-2016, Long March 3A rockets had **launched successfully** 25 times.

DATA FILE

SIZE: 52 m (170 ft) tall

FIRST LAUNCH: 8 February 1994

NUMBER OF MISSIONS: 25

SPACE AGENCY: CNSA (China)
