

SOJOURNER

Rover

Sojourner's landing on Mars, inside the Mars Pathfinder landing craft, was cushioned by giant airbags as well as a parachute and rockets. The first rover on Mars, Sojourner was designed to last for just a month; in fact, it survived for almost three months, and found that the rocks near the landing site were largely volcanic in origin.

DATA FILE

SIZE: 28 cm (11 in) tall

DATE OF LAUNCH: 4 December 1996

MISSION DURATION: 9 months, 23 days (last contact)

SPACE AGENCY: NASA

Sojourner

The rover was **named after Sojourner Truth**, a pioneer of women's rights.
