

OPPORTUNITY

Rover

Opportunity landed on Mars on 25 January 2004 and has travelled over 42 km (26 miles) over the Red Planet's deserts since then, studying Martian geology. It has proved that Mars once had flowing liquid water, even though it is now cold and dry. Opportunity has survived being stuck in the sand and a terrible Martian dust storm.

DATA FILE

SIZE: 1.5 m (5 ft) tall

DATE OF LAUNCH: 7 July 2003

MISSION DURATION: Ongoing

SPACE AGENCY: NASA

Image of Mars's surface taken by Opportunity

Designed to last 90 days, Opportunity has survived for over 12 years.
