

# CEPHEUS

Cepheus is named after a king of Greek mythology. Its most famous star is Delta Cephei, which swells and shrinks, and has inspired the term “Cepheid” – used for stars that display this behaviour.

## DATA FILE

SIZE RANKING: 27th

BRIGHTEST STAR: Alderamin

MONTH WHEN BEST VISIBLE:  
October – Northern hemisphere

# CASSIOPEIA

W-shaped Cassiopeia, named after the wife of King Cepheus, is home to the remains of an exploding star, a supernova, which blew up in 1572. It can be seen with a powerful telescope.

## DATA FILE

SIZE RANKING: 25th

BRIGHTEST STARS: Shedar and  
Gamma Cassiopeiae

MONTH WHEN BEST VISIBLE:  
November – Northern hemisphere
