

CAMELOPARDALIS

The Giraffe

The Greeks called giraffes “camel leopards” because of their long necks and spotted bodies, and this is how Camelopardalis gets its name. It is a very faint constellation.

DATA FILE

SIZE RANKING: 18th

BRIGHTEST STAR: Beta Camelopardalis

MONTH WHEN BEST VISIBLE:
February – Northern hemisphere

AURIGA

The Charioteer

The constellation Auriga is home to Capella, the sixth-brightest star in the sky. To the ancient Greeks, the constellation represented a charioteer carrying a goat and two baby goats on his arm.
