

LYNX

Polish astronomer Johannes Hevelius created this extremely faint constellation in 1687. He drew a lynx around the stars because he said that you would need the eyesight of a lynx to see it.

DATA FILE

SIZE RANKING: 28th

BRIGHTEST STAR: Alpha Lyncis

MONTH WHEN BEST VISIBLE:
March – Northern hemisphere

URSA MAJOR

The Great Bear

The seven main stars of Ursa Major are known as “The Plough”, or the “Big Dipper” (shown in purple). Mizar, in the “bear’s tail”, has a companion star called Alcor that is visible to the naked eye.
