

LACERTA

The Lizard

Polish astronomer Johannes Hevelius created this dim, sprawling constellation in 1697. It represents a lizard scuttling between Andromeda and Cygnus.

DATA FILE

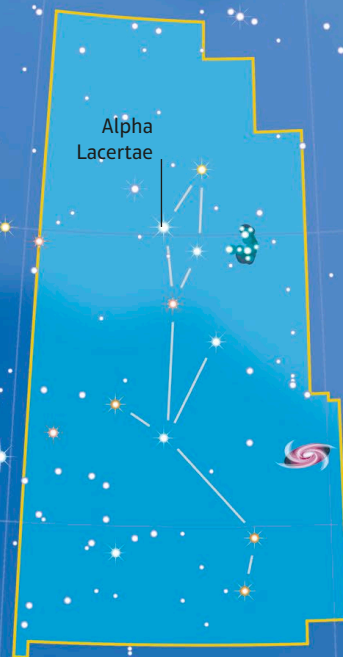

SIZE RANKING: 68th

BRIGHTEST STAR: Alpha Lacertae

MONTH WHEN BEST VISIBLE:
October – Northern hemisphere

TRIANGULUM

The Triangle

The jewel in this constellation is the stunning Triangulum Galaxy. Just half the size of the Milky Way, this spiral galaxy is the third-largest member of our local group of galaxies.
