

TAURUS

The Bull

Taurus is one of the most interesting constellations. The bull's "head" is drawn around the Hyades star cluster, and the red giant Aldebaran is its "eye". Taurus also boasts the Crab Nebula, the remains of an exploded star.

DATA FILE

SIZE RANKING: 17th

BRIGHTEST STAR: Aldebaran

MONTH WHEN BEST VISIBLE:
January – Northern hemisphere

GEMINI

The Twins

The two brightest stars in this constellation are named after the mythical twins Castor and Pollux. Amazing Castor is actually a family of six stars. Pollux is circled by a planet bigger than the gas giant Jupiter.
