

Pink region shows a cloud of hot gas that envelopes a galaxy cluster

Four galaxy clusters collided to create the giant cluster seen in this combination of X-ray and visible light images. Dark matter threads its way through the cluster, as seen in blue.

Dark matter is everywhere – even **inside your body**.

Blue region is filled with dark matter, whose gravity is confining the galaxies

INGREDIENTS OF THE UNIVERSE

Ordinary matter – including the atoms that make up stars, planets, and ourselves – is only a minor ingredient in the Universe. It is far outweighed by invisible dark matter. But the most important constituent is dark energy, whose power is accelerating the expansion of the Universe.

What is space?
