

VULPECULA

The Fox

This faint constellation is home to PSR B1919+21 – the first pulsar discovered, in 1967. It spins round once every 1.337 seconds, flashing pulses of radiation.

DATA FILE

SIZE RANKING: 55th

BRIGHTEST STAR: Anser

MONTH WHEN BEST VISIBLE:
September – Northern hemisphere

DELPHINUS

The Dolphin

Delphinus resembles a leaping dolphin. Nicolaus Venator, an Italian astronomer, named its brightest stars after himself (try spelling the names of the stars backwards).

DATA FILE

SIZE RANKING: 69th

BRIGHTEST STARS: Rotanev and Sualocin

MONTH WHEN BEST VISIBLE:
September – Northern hemisphere
