

EQUULEUS

The Foal

Equuleus is the second smallest constellation in the night sky, larger than only Crux. Named after the brother or son of Pegasus, the winged horse in Greek mythology, it contains little of interest.

DATA FILE

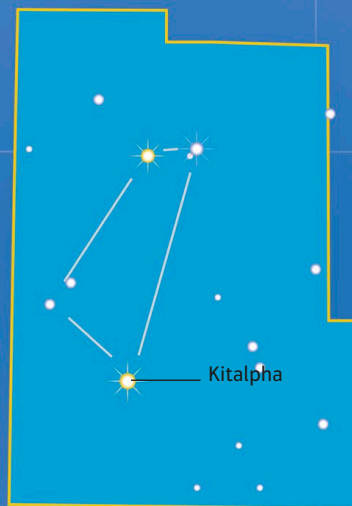

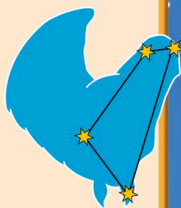

SIZE RANKING: 87th

BRIGHTEST STAR: Kitalpha

MONTH WHEN BEST VISIBLE:
September – Northern hemisphere

PEGASUS

The Winged Horse

This constellation rose to fame in 1995 when one of its stars – 51 Pegasi – became the first Sun-like star found beyond the Solar System to have a planet circling it.
