

AQUARIUS

The Water Carrier

Aquarius shares the sky with other watery constellations, like Cetus and Pisces. It is home to the spectacular Helix Nebula, the remains of a dying star that can be seen with a telescope.

DATA FILE

SIZE RANKING: 10th

BRIGHTEST STARS: Sadalsuud and Sadalmelik

MONTH WHEN BEST VISIBLE:
October – Southern hemisphere

PISCES

The Fishes

Pisces is very faint and sprawling. Its only distinction is that it lies in the zodiac – the band of sky through which the Sun moves. It includes M74, a beautiful, face-on spiral galaxy.

DATA FILE

SIZE RANKING: 14th

BRIGHTEST STAR: Al Pherg

MONTH WHEN BEST VISIBLE:
November – Northern hemisphere
