

MONOCEROS

The Unicorn

Monoceros depicts the one-horned, mythical beast called the Unicorn. The constellation has no bright stars, but it does contain the glorious Rosette Nebula, best seen on long-exposure images.

DATA FILE

SIZE RANKING: 35th

BRIGHTEST STAR: Alpha Monocerotis

MONTH WHEN BEST VISIBLE:
February – Southern hemisphere

HYDRA

The Water Snake

Hydra is the biggest constellation, stretching more than a quarter of the way around the sky. Of note is M83, a fantastic spiral galaxy that is visible face-on from Earth.
