

ANTLIA

The Air Pump

Created in the 1750s by the French astronomer Nicolas Louis de Lacaille, this faint constellation contains several double stars, which you can see with binoculars or through a small telescope.

DATA FILE

SIZE RANKING: 62nd

BRIGHTEST STAR: Alpha Antliae

MONTH WHEN BEST VISIBLE: April – Southern hemisphere

SEXTANS

The Sextant

After their observatory burnt down in 1679, Polish astronomers Johannes and Elisabeth Hevelius honoured the instrument for measuring star positions, the sextant, by creating Sextans in 1687.
