

CENTAURUS

The Centaur

This constellation contains Alpha Centauri, the Sun's nearest bright neighbour. Its fainter companion, Proxima Centauri, lies slightly closer to us, at a distance of 4.24 light years.

DATA FILE

SIZE RANKING: 9th

BRIGHTEST STARS: Alpha Centauri and Hadar

MONTH WHEN BEST VISIBLE: May – Southern hemisphere

LUPUS

The Wolf

Lupus represents the wolf, although Greek astronomers imagined it as an animal being held up for sacrifice on an altar by Centaurus, the centaur. It is possible to see some lovely double stars with a telescope.

DATA FILE

SIZE RANKING: 46th

BRIGHTEST STAR: Alpha Lupi

MONTH WHEN BEST VISIBLE: June – Southern hemisphere
