

PISCIS AUSTRINUS

The Southern Fish

This southern constellation contains a bright star called Fomalhaut, which is Arabic for “fish’s mouth”. This star has a dusty disc, in which the Hubble Space Telescope has found a large planet.

DATA FILE

SIZE RANKING: 60th

BRIGHTEST STAR: Fomalhaut

MONTH WHEN BEST VISIBLE:
October – Southern hemisphere

SCULPTOR

The Sculptor

The jewel in this faint constellation is the Silver Coin Galaxy (NGC 253), discovered by astronomer Caroline Herschel in 1783. It is visible, nearly edge-on, through binoculars and small telescopes.

DATA FILE

SIZE RANKING: 36th

BRIGHTEST STAR: Alpha Sculptoris

MONTH WHEN BEST VISIBLE:
November – Southern hemisphere
