

FORNAX

The Furnace

The Hubble Space Telescope has peered its furthest into the Universe among the faint stars of this constellation, spotting galaxies almost 13.2 billion light years away from us.

Dalim

DATA FILE

SIZE RANKING: 41st

BRIGHTEST STAR: Dalim

MONTH WHEN BEST VISIBLE:
December – Southern hemisphere

CAELUM

The Chisel

This dim star pattern is one of several 18th-century additions by Nicolas Louis de Lacaille that depict artists' tools. In this instance, it represents a chisel used by engravers.
