

MUSCA

The Fly

The constellations Musca and Crux share the distinctive Coalsack Nebula – a large, dark cloud in space that is silhouetted against the distant stars of the Milky Way.

DATA FILE

SIZE RANKING: 77th

BRIGHTEST STAR: Alpha Muscae

MONTH WHEN BEST VISIBLE: May – Southern hemisphere

CIRCINUS

The Compasses

This faint constellation hosted the first known supernova recorded by the ancient Chinese in 185 CE. This supernova, or exploding star, was brighter than Venus in the night sky.

DATA FILE

SIZE RANKING: 85th

BRIGHTEST STAR: Alpha Circini

MONTH WHEN BEST VISIBLE: June – Southern hemisphere
