

TUCANA

The Toucan

Tucana contains the giant globular star cluster 47 Tucanae and the Small Magellanic Cloud, a mini-galaxy about 200,000 light years away from Earth. Both are visible to the naked eye.

DATA FILE

SIZE RANKING: 48th

BRIGHTEST STAR: Alpha Tucanae

MONTH WHEN BEST VISIBLE:
November – Southern hemisphere

HYDRUS

The Little Water Snake

Created by Dutch explorers in 1597, this constellation is insignificant compared to the other Water Snake, the ancient Hydra. It slithers between the Large and Small Magellanic Clouds.

DATA FILE

SIZE RANKING: 61st

BRIGHTEST STAR: Beta Hydri

MONTH WHEN BEST VISIBLE:
December – Southern hemisphere
