

PAVO

The Peacock

Peacock

Formed from stars first observed by Dutch sailors in the 16th century, Pavo depicts a peacock, a bird with a fan-like tail. Its brightest star is nicknamed "Peacock".

DATA FILE

SIZE RANKING: 44th

BRIGHTEST STAR: Peacock

MONTH WHEN BEST VISIBLE:
September – Southern hemisphere

OCTANS

The Octant

Introduced in the 18th century, Octans represents a navigation instrument called an octant. The faint southern Pole Star, Sigma Octantis, lies in Octans, but it is barely visible to the naked eye.
