

A large, white, cylindrical space station module, likely the International Space Station, is shown in a horizontal orientation against a bright blue sky. The module has various smaller components and solar panels attached to its exterior. Below the module, a vast expanse of white clouds covers the Earth's surface, creating a textured, undulating appearance. The overall scene is a high-angle view from space.

REFERENCE

Have you ever wondered where space missions are launched from and how the exploration of space has unfolded? Find the answers here, along with the most amazing facts about extraordinary things in our Universe – from the speed of light to the number of galaxies out there. A glossary explains many of the terms used in the book.
