

Our Solar System
is **4.6 billion**
years old -
young on the
cosmic scale.

10

7

Planetary orbit
around the Sun

9

1 THE SUN

2 MERCURY

Distance from the Sun:
57.8 million km (36 million miles)

3 VENUS

Distance from the Sun:
108.2 million km (67 million miles)

4 EARTH

Distance from the Sun:
149.6 million km (93 million miles)

5 THE MOON

Distance from Earth:
385,000 km (239,220 miles)

6 MARS

Distance from the Sun:
227.9 million km (141.6 million miles)

7 THE ASTEROID BELT

Distance from the Sun:
270–620 million km (168–385 million miles)

8 JUPITER

Distance from the Sun:
778 million km (484 million miles)

9 SATURN

Distance from the Sun:
1.4 billion km (890 million miles)

10 URANUS

Distance from the Sun:
2.8 billion km (1.7 billion miles)

11 NEPTUNE

Distance from the Sun:
4.5 billion km (2.8 billion miles)

Held together by the Sun's gravity, the eight planets orbit the central star along oval paths. The greater the distance from the Sun, the longer it takes for a planet to complete its orbit.
