

The mantle is made of soft rock warmed by the core, which slowly churns about over millions of years

Venus is so hot, rocks on its surface **glow in the dark**.

The planet's crust is made of basalt and other silicate rocks

HIGHEST MOUNTAIN

Venus is the only planet named after a woman, as are most of its features. However, the planet's highest mountain, Maxwell Montes, is the only feature on Venus to be named after a man. It commemorates James Clerk Maxwell, a Scottish physicist who predicted radio waves. The mountain stands at a height of 11 km (7 miles).

Thick clouds cloak the entire planet
