

JUPITER

Jupiter is the king of the Solar System. This mighty planet could contain 1,300 Earths, and has a powerful magnetic field that causes spectacular light displays (called aurora) at its poles. Unlike solid, rocky planets, such as Earth, Jupiter is made mostly of gas. It has at least 67 moons. Its strong gravity has captured many asteroid-like moons.

Jupiter's colourful bands are made up of clouds at different heights

DATA FILE

Earth

TIME TO ROTATE ONCE: 9.9 hours

YEAR: 12 Earth years

NUMBER OF MOONS: At least 67

CLOUD-TOP TEMPERATURE:
-110°C (-166°F)

The Great Red Spot is an enormous storm that has raged for more than two centuries
