

SATURN

Saturn's spectacular rings are so wide they would stretch almost from Earth to the Moon. They are an amazing sight through a telescope. Made of ice-covered debris with particles ranging in size from ice cubes to houses, the rings are probably the remains of a moon torn apart by Saturn's gravity.

Saturn's atmosphere is mostly hydrogen and helium, with clouds of ammonia ice and water ice on top

Saturn's rings orbit the planet in an almost perfectly flat plane

DATA FILE

TIME TO ROTATE ONCE: 10.7 hours

YEAR: 29 Earth years

NUMBER OF MOONS: At least 62

CLOUD-TOP TEMPERATURE:
-140°C (-220°F)
