

DATA FILE

SMALLEST EXOPLANET: Kepler-37b,
3,860 km (2,400 miles) in diameter

LARGEST EXOPLANET: HAT-P-32b,
291,000 km (180,800 miles) in diameter

COLDEST EXOPLANET: OGLE-2005-
BLG-390Lb, -220°C (-364°F)

HOTTEST EXOPLANET: Kepler-70b,
 $6,900^{\circ}\text{C}$ ($12,450^{\circ}\text{F}$)

Slightly smaller than our Sun,
the orange dwarf HD 189733 A
lies 63 light years away from
Earth. It is only one-third as
bright as the Sun.
