

A large radio telescope dish is visible in the lower left, set against a dark blue night sky filled with stars. The dish is white and mounted on a complex metal structure. In the background, another smaller dish is partially visible. The overall scene is a deep blue with numerous small white stars scattered across the sky.

DISCOVERING THE UNIVERSE

Throughout history, people have endeavoured to understand the mysteries of the Universe, first with just their eyes and minds, and then with increasingly powerful telescopes. Astronomers have tracked down evidence of the Big Bang, and discovered giant galaxies, deadly black holes, newborn and exploding stars, and thousands of distant planets, some of which may be home to alien life.
