

ISAAC NEWTON

1642-1726

In 1687, Isaac Newton became the first scientist to understand that the movement of the planets was controlled by gravity, a force that attracts all objects that have mass. The closer the bodies, the stronger the force. Even now, physicists do not understand how gravity works.

Newton was also **Master of the Royal Mint**, preventing the forgery of coins.

DATA FILE

KEY ACHIEVEMENT: The first to understand gravity

COUNTRY OF ORIGIN: UK

YEAR OF DISCOVERY: 1687

Replica of Isaac Newton's telescope
