

EDWIN HUBBLE

1889-1953

Hubble was an amateur boxer, and trained as a tank driver.

In 1929, astronomer Edwin Hubble discovered that other galaxies are moving away from us. He concluded that the Universe was expanding from a huge, hot explosion, now known as the "Big Bang". By studying the speeds at which these galaxies were moving, astronomers calculated that our Universe was born almost 14 billion years ago.

DATA FILE

KEY ACHIEVEMENT: Proved that the Universe is expanding

COUNTRY OF ORIGIN: United States

YEAR OF ACHIEVEMENT: 1929
