

FRED HOYLE

1915–2001

A prolific science-fiction writer, **Hoyle wrote the hit TV show *A for Andromeda*.**

In 1957, Fred Hoyle made a major breakthrough when he worked out how elements form in the centre of a star. He was a maverick among astronomers. Hoyle never agreed with what was commonly believed, and dismissed the “Big Bang” theory, believing instead in a “steady-state” Universe that was unchanging, although that theory has been proved to be wrong.
