

# JOCELYN BELL BURNELL AND ANTONY HEWISH

Born 1943 and 1924

In 1967, using the radio telescope designed by Antony Hewish, Jocelyn Bell Burnell discovered regular “pulses” of radio waves coming from unknown objects in space. These compact neutron stars, that spin so rapidly they appear to flash like a lighthouse, were named “pulsars”.

Artist's impression of a pulsar

Hewish **won the Nobel Prize** for Physics, but Bell Burnell did not.

## DATA FILE

**KEY DISCOVERY:** Identified the first pulsar

**COUNTRY OF ORIGIN:** UK

**YEAR OF DISCOVERY:** 1967
