

V-2 ROCKET

Rocket

The Germans developed the V-2 rocket as a military missile during World War II. After Germany's defeat, a number of V-2s were captured and taken to the United States, along with their principal designer, the brilliant Wernher von Braun. The V-2s paved the way for America's civilian space programme.

The V-2 rocket was the first man-made object to **pass the boundary of space.**

DATA FILE

SIZE: 14 m (45 ft) long; 1.65 m (5.5 ft) in diameter

WEIGHT: 12,500 kg (27,600 lb)

FIRST LAUNCHED: 12 August 1943

COUNTRY: Germany and, later, United States

Military display of captured German V-2 rocket in London after World War II
