

Two years old

Full of holes and with crumbling bark, after two years the log is almost completely covered in lichens, fungi, and mosses. Wasps and stag beetles nest here, and woodpeckers come to feast on their grubs and larvae.

WHAT CAN YOU FIND?

If you find a fallen log, make a list of all the plants and animals you can see living on it. Return to the same log after some time has passed to see what changes have occurred.
