

Forest spirits

The ancient Greeks believed forests were inhabited by spirits, which they called nymphs. Nymphs were said to be beautiful girls who lived near water, mountains, or woods. Wood or tree nymphs, called dryads, were even thought to live in or near particular trees.

Wild men of the woods

Many people in North America believe that huge, hairy, apelike creatures still live deep in the woods of the USA and Canada. This beast has been called a “bigfoot,” but it is also known as a “sasquatch” or even a “wood ape.”

Tricksters in the trees

In North America, Native American tribes tell stories of “little spirits” that live in forests. They are called “canoti” by some tribes and are described as being tricksters who caused hunters to lose their way.
