

This beech leaf is a typical wide and flat deciduous leaf.

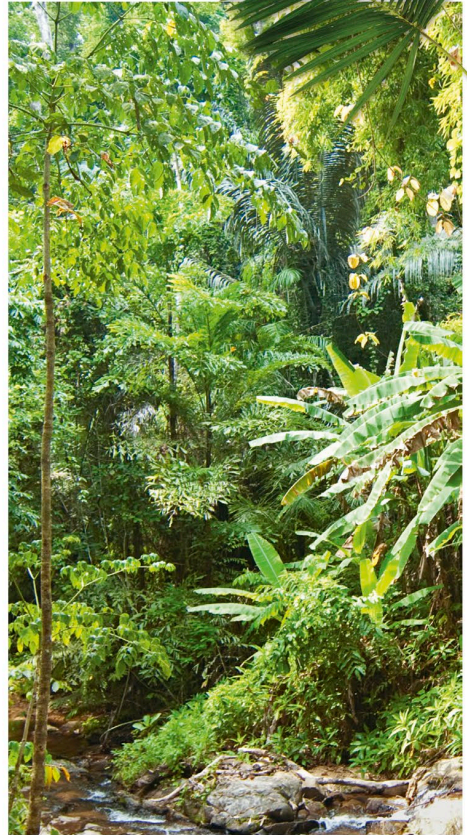

Deciduous forests

The broader, spreading trees of deciduous forests have flat, green leaves in spring and summer that fall off in autumn. Trees such as beeches and oaks grow here.

Sweet chestnuts

Rain forest leaves come in all shapes and sizes.

Rain forests

Rain forests get lots of rain all year round. Some are so packed with different types of tree that raindrops take 10 minutes to reach the ground!
