

Computer languages

Thousands of different programming languages have been created. Which one you should use depends on a number of factors, such as the type of program being written and which kind of computer it will run on.

Popular programming languages

Some languages have emerged as the most popular for creating certain types of program on certain types of computer. Here is how to run a simple “Hello World!” program in a few popular programming languages.

games

Making **206–207** ›
apps

```
#include <iostream>
int main()
{
    std::cout << "Hello World!" << std::endl;
}
```

△ C++

Based on C, but with extra features. Used in programs that need to be fast, such as console games.

```
class HelloWorldApp {
public static void main(String[] args) {
    System.out.println("Hello World!");
}
}
```

△ Java

A very versatile language that can run on most computers. It's often used for coding on the Android operating system.

```
#import <stdio.h>
int main(void)
{
    printf("Hello World!");
}
```

△ Objective-C

Based on C, with some extra features. It has become popular because of its use on Apple's Mac and iOS devices.

```
<?php
echo "Hello World!";
?>
```

```
#include <stdio.h>
main()
{
    printf("Hello World!");
}
```

△ C

One of the most popular languages of all time, C is often used for programming hardware.

```
alert('Hello World!');
```

△ JavaScript

Used to create programs that run on web browsers, such as simple games and email websites.

△ PHP

Mostly used for creating interactive websites, PHP runs on the web servers that host websites.
