

Making apps

Mobile phones have opened up a world of possibilities for coders. With a computer in everyone's pocket, mobile apps can use new inputs, such as location-finding and motion-sensing, to give users a better experience.

What is an app?

"App" (short for "application") is a word that describes programs that run on mobile devices, including smartphones, tablets, and even wearable technology such as watches. There are many different categories of apps that do different things.

◀ Games

All sorts of games are available on mobile devices, from simple puzzle games to fast-paced action adventures.

◀ Social network

Social apps can allow people to connect with friends, whether they are nearby or far away, to share thoughts, pictures, music, and videos.

△ Weather

Mobile apps use your location to provide accurate weather forecasts, and also allow you to check the weather around the world.

△ Travel

Travel apps use your location combined with other users' reviews to provide recommendations for restaurants, hotels, and activities.

◀ Sport

People use apps to track their fitness when running or cycling, and can also keep up to date on the latest sports scores while on the go.

△ Education

Educational apps are great for learning. Young children can learn to count and spell, and older people can learn a new language.
