

▷ Test your code

Test your code by entering crazy values to see what happens. See how well it stands up to errors. Try rewriting it to improve it or try rewriting someone else's—you'll learn all their secret tricks.

◁ Build a robot army

You can connect your computer to all sorts of programmable devices, from flashing LED lights to robots. It's fun and you'll learn lots as you figure out how to conquer the world.

△ Learn new languages

Become multilingual. Every new programming language you learn will teach you more about the ones you already know (or *thought* you knew). You can download free versions of most languages.

▷ Pull a computer to bits

Take an old computer apart to see how it works (ask permission first!). There aren't many components, so it won't take long to figure out what all the bits are. Best of all, build your own computer and then run your code on it.

▷ Win a prize

When your skills develop, why not enter an online coding contest? There are lots to choose from at all different levels. The toughest are worldwide competitions like Google's Code Jam, but there are easier challenges too.

REMEMBER

Have fun!

Coding is a lot like trying to solve puzzles. It's challenging and you'll often get stuck. Sometimes it's frustrating. But you'll also have breakthroughs when you solve a problem and feel a buzz of excitement at seeing your code work. The best way to keeping coding fun is to take on challenges that suit you. If a project is too easy you'll get bored; if it's too hard you'll lose interest. Never be afraid to fiddle, tinker, experiment, and break the rules—let your curiosity lead you. But most of all, remember to have fun!
