

Skywriting

In this program, you control a plane. As you fly it will leave a smoke trail, so you can draw in the sky. Start a new project and add the plane sprite, then add this script.

▷ Flying high

Use the left and right keys to turn the plane. Switch on the smoke with the "a" key and turn it off with the "z" key. Press the spacebar to clear the sky.

Keeps the plane moving

You can only use colors that appear on the Scratch interface. To select red, click in the square and then click on the red stop button above the stage

Makes the line thicker

Turtle graphics

Using sprites to draw pictures is called "turtle graphics." That's because there's a type of robot called a turtle that can be moved around the floor to draw pictures. The first programming language to use turtle graphics was called LOGO.
