

Variables

In coding, a variable is the name for a place where you can store information. Variables are used to remember things such as the score, a player's name, or a character's speed.

Creating a variable

You can create a variable to use in your program using the “Data” section of the blocks palette. Once a variable has been created, new blocks appear in the blocks palette ready for you to use.

◀ Storing data

Variables are like boxes where you can store different bits of information for use in your program.

1 Make a variable

First, click the “Data” button in the blocks palette. Then select the “Make a Variable” button.

2 Name the new variable

Give the variable a name that will help you to remember what it does. Select which sprites will use the variable, then click “OK.”

3 A new variable is created

Once a new variable has been created, new blocks appear in the blocks palette. The menus inside these blocks let you select which variable they apply to, if you have created more than one.
