

Moving the sprite

Coordinates are used to move a sprite to a particular spot on the stage. It doesn't matter how near or far away the spot is. The "glide 1 secs to x:0 y:0" block from the "Motion" section of the blocks palette makes the sprite glide there smoothly.

Change the coordinate numbers to make the sprite go somewhere else

```

when clicked
  glide 1 secs to x: 150 y: 100
  glide 1 secs to x: -150 y: -100
  glide 1 secs to x: -200 y: 100
  glide 1 secs to x: 0 y: 0
  
```

△ Control the sprite with a script

Can you work out the path the sprite will take when you run this script? Try it and see!

Moves the sprite left

```

change x by -10
  
```

Moves to the middle of the stage

```

set x to 0
  
```

change y by 125

```

change y by 125
  
```

set y to 180

```

set y to 180
  
```

Moves up to the top of the stage

△ Change x and y separately

These blocks can be used to change x without changing y, and the other way around.

Crazy horse's trip

Try this fun script to test out coordinates. Select the "Horse1" sprite from the sprite list and give it the below script. This program uses the "go to x:0 y:0" block to keep moving the horse to a random position, drawing a line behind it as it goes.

when clicked

```

pen down
  
```

This block leaves a line when the horse moves

```

forever
  go to x: pick random -240 to 240 y: pick random -180 to 180
  wait 0.2 secs
  
```

This block from the "Operators" menu selects a random horizontal position

Selects a random vertical position
