

Sprite collisions

It can be useful to know when one sprite touches another—in games, for example. Use “Sensing” blocks to make things happen when sprites touch each other, or when a sprite crosses an area that is a certain color.

Using “Sensing” blocks

Use the “Sensing” blocks to turn your controllable cat into a game. Start by adding the movement script created on the opposite page to the cat sprite, then add the “room1” backdrop and the elephant sprite. Using the “Sounds” tab, add the “trumpet2” sound effect to the elephant, then build it the script below.

▽ Find the elephant

This script uses “Sensing” blocks to control the relationship between the cat and the elephant. As the cat gets nearer, the elephant grows. When the cat touches it, the elephant switches costume, makes a sound, and hides somewhere else.
