

Sending messages

Sometimes it's useful for sprites to communicate with each other. Sprites can use messages to tell other sprites what to do. Scratch also lets you create conversations between sprites.

Broadcasting

The broadcast blocks in the “Events” menu enable sprites to send and receive messages. Messages don't contain any information other than a name, but can be used to fine-tune a sprite's actions. Sprites only react to messages that they are programmed to respond to—they ignore any other messages.

This “Events” block lets a sprite send a message to all the other sprites

broadcast message1 ▼

This block starts a script when a sprite receives a message

△ Broadcast blocks

One type of broadcast block lets a sprite send a message. The other tells the sprite to receive a message. Choose an existing message or create a new one.
