

Creating blocks

To avoid repeating the same set of blocks over and over again, it's possible to take a shortcut by creating new blocks. Each new block can contain several different instructions.

Making your own block

You can make your own blocks in Scratch that run a script when they're used. Try this example to see how they work. Programmers call these reusable pieces of code "subprograms" or "functions".

- 1 Create a new block**
Click on the "More Blocks" button, and then select "Make a Block". Type the word "jump" and click "OK".

- 2 New block appears**
Your new block "jump" appears in the blocks palette, and a "define" block appears in the scripts area.

The new block

Define the "jump" block in the scripts area

- 3 Define the block**
The "define" block tells Scratch which blocks to run when using the new block. Add this script to define the block.

- 4 Use the block in a script**
The new block can now be used in any script. It's as if those jumping blocks were in the script individually.
