

MONKEY MAYHEM

Adding more sprites

The monkey can now be moved across the stage using the left and right arrow keys. To make the game more interesting, add some more sprites. Give the monkey some bananas to throw, and a bat to throw them at!

5 Add the "Bananas" sprite from the sprite library, then give it this script. When the game starts, the monkey will be holding the bananas. When the spacebar is pressed, they will shoot vertically up the stage. The bananas then reappear at one side of the stage, where they can be picked up again.
