

Scratch and Python

Lots of elements that are used in Scratch are also used in Python—they just look different. Here are a few similarities between the two languages.

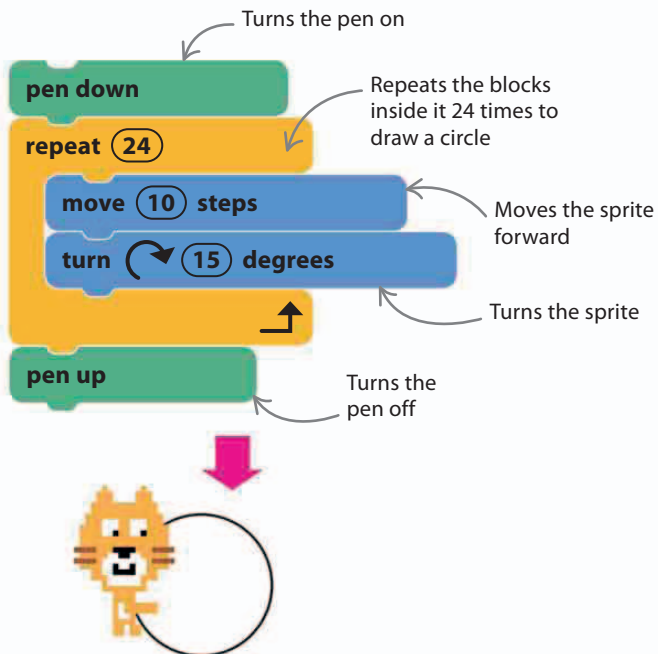

△ Print in Scratch

In Scratch, the “say” block is used to show something on the screen.

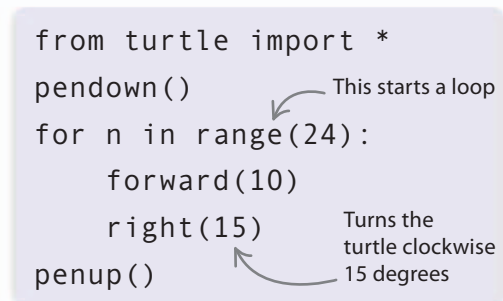

△ Print in Python

In Python, a command called “print” displays text on the screen.

△ Turtle graphics in Scratch

The script above uses the “pen down” block to move the cat sprite and draw a circle.

△ Turtle graphics in Python

There's also a turtle in Python. The code above can be used to draw a circle.
