

Seasons

The weather **changes** at **different times** through the year. These times are called the **seasons**.

Four seasons

In most areas of the world there are four seasons: winter, spring, summer, and autumn.

Winter

In winter, the weather is chilly. Many plants don't grow. Some trees have bare branches.

... Some animals hide in burrows, away from the cold.

Birds build nests and their eggs hatch.

Spring

In spring, the weather begins to warm up. Plants start to flower and new leaves appear on the trees.
