

It's windy today

Wind is air moving. It can gently swoosh along as a **breeze** or tear along as a strong wind.

You might see a windsock fluttering in the wind at an airport. It helps pilots by showing them which way the wind is blowing.

Where does it blow?

It's useful for pilots to know the way the wind is blowing. Flying along with the wind is much easier than flying against it.

You can fly a kite on a windy day.
