

EDWIN HUBBLE

American cosmologist
1889–1953

Edwin fell in love with science as a student. However, Edwin's father didn't know anything about physics and was worried. He wanted Edwin to become a lawyer. Edwin followed his father's wishes and studied law, but he couldn't stop thinking about physics. He went on to do a second graduate degree in astronomy, using a telescope to take photographs of strange clusters of stars known as nebulae.

Edwin viewing the stars

The Mount Wilson Observatory

Edwin was offered a job at the Mount Wilson Observatory in California, where the world's most powerful telescope, the 100-inch Telescope, was being built. Edwin joined the US Army to fight in World War II, but afterward he returned to gaze at the stars.
