

Hayden Planetarium

The globe-shaped theater inside this glass building is the Hayden Planetarium. Thousands of people visit it every year, to see incredible shows exploring distant planets, stars, and galaxies.

Space storyteller

Neil is not just a talented scientist, but also a great science communicator. He loves inspiring people who haven't studied science to find out more about the universe and everything in it—from the largest stars to the smallest life forms that may exist somewhere in space. Neil began by writing magazine articles and books, and has since hosted hugely popular shows on radio and television. He has won many awards for his work and has been honored in space as well as on Earth—with an asteroid named 13123 Tyson.

Knowing where
you came from is no less
important than knowing
where you are going.
